# GANTRY | FOR MOLD MAKERS

The Gantry features a fixed table and moving head designed for cutting very large, heavy material. This machine allows for vertical, horizontal, and angle cuts without having to move the material; ideal for ingots and forgings as well as large blocks of steel.

The flexibility of the moving head and rotating blade guides, along with the 360 turntable, you can easily make up to 9 cuts with a single set-up.

## MAIN FEATURES

- Safety operations.
- Carbide blade
- No needs to turn the material
- Indipendent vices system
- Great flexibility
- Easy loading material with crane or forklift
- Easy and secure material download operations
